

Spline Motion and Google Fiber: Check out this honor!

Eric Spikes, partner at Spline Motion Studios, had the honor of pushing the submit button for Fresno in a national Google Fiber contest.

Does Fresno have what it takes to get Google Fiber?

In an effort to bring Google Fiber to Fresno, CVBI Member Eric Spikes-partner of Spline Motion Studios submitted Fresno's request yesterday at a City Hall Rally. For those who have not heard of Google Fiber, it is an ultra-high speed network that will make internet connections faster for most Americans. Google Fiber will operate at more than 1 gigabit per second which will change the way we think about our Internet.

Why does Fresno care?

Google will offer its experimental Google Fiber to a community that has somewhere between 50,000 to 500,000 people. At 100 times the speed of the typical American internet connection, Google Fiber would dramatically change the way we think about internet.

Fresno Ranking

Earlier this morning Fresno was ranked 4th, up 2 spots from last week. That is an increase in internet 'noise' of 174% It is inspiring to see Fresno residents join together to post videos, songs, and fan pages to generate information about our community. We wanted Google to understand that we "want our Google Fiber," and have now got their attention!
